**Research Experience**

**3D Object Detection and Motion Tracking** Apr 2017 - Present

Exploring optimal ways of combining deep learning with 3D geometry to enable accurate and robust 3D object detection and motion estimation.

Developing general 3D detection frameworks using adaptive sensor inputs (monocular, stereo, LiDAR, and multi-sensor fusion).

**Visual-inertial State Estimation (VINS)** Sep 2016 - Jul 2017

Fusing the monocular camera, IMU, and loop information in a tightly-coupled manner, VINS achieves accurate and low drift 6-DoF state estimation, which boosts multiple applications (UAV navigation, Augmented Reality).
